

Zonexa v1.0 — Presentation Walkthrough Script

Goal: A 5–7 minute guided demo that shows Zoneware's project portal as a working system, mapped to the management meeting on 28 July 2026.

Before you start: open the site, use **Reset Demo Data** (sidebar footer) so the demo starts clean.

Slide 1 — Sign in (30s)

- Open `index.html` → sign-in page.
- Enter **ZW-0001** (MD) → lands on the **Command Center**.
- Say: *"This is the single dashboard the MD asked for — everything at the touch of one button."*

Slide 2 — Executive Summary & Dashboard (60s)

- Point to the **Executive Summary** (portfolio health bars, file bottlenecks, spend authority, compliance countdown).
- Say: *"A one-touch view of the whole portfolio — which projects are Green/Amber/Red, where files are stuck, and what compliance is expiring."*
- Then the **KPI row** (project count, portfolio value, avg progress, delays, stale updates).

Slide 3 — Open a Project (60s)

- Click any **project card**, e.g. a Red/Amber one → detail drawer opens.
- Walk the tabs: **Overview** → **Progress (trend)** → **Document Control (file location)** → **Cost Control** → **Risks** → **Issues & Actions** → **Documents**.
- Highlight: *"Statuses are rule-based — never typed. Progress % drives Green/Amber/Red automatically."*
- Click **■ Print Report** to show the clean one-pager (print/PDF).

Slide 4 — File & Approval Workflow ("FedEx-style") (60s)

- Use **■ Portals** → **Contract Portal** (or sidebar → File & Approvals).
- Show the **approval chain** (Procurement → Audit → User Dept → Engineering → Accounts → STO → CIA → Governor) and the **File Journey** table — where each file is, and its progress bar.
- Say: *"This is the MD's exact ask — knowing a file is stuck on one Permanent Secretary's table, in real time."*

Slide 5 — Payment Requisitions & Spend Authority (45s)

- Switch to **Accounts Portal** → **Payment Requisitions**.
- Show a **Pending MD** requisition, the **Escalate** flag for above-limit amounts, and the **Spend Authority** table.
- Say: *"This is the 'trust + controls' ask — the MD can delegate approval up to a limit, and anything above escalates to him."*

Slide 6 — Admin Console (governance) (45s)

- Switch to **Admin Console** (login as `ZW-9999` or via portal).
- Briefly show **Revoke** (and Restore) and **Rotate Code**.
- Say: *"Super Admin controls access — revoke, restore, and issue fresh codes. Every action is audited."*

Slide 7 — Optional live update + reset (30s)

- On Accounts, **Record a Payment** → outstanding recomputes; or on Staff, **Update Progress** → status changes.
- Say: "It's a live system — updates persist and recalculate. And we can reset it any time."
- End with **Reset Demo Data** to leave a clean state.

Demo codes

Code	Identity	Portal
ZW-0001	MD	Command Center (all portals)
ZW-7293	Contract Lead	Contract Portal
ZW-6000	Accounts	Accounts Portal
ZW-3387	Project Manager	Staff Workspace
ZW-9999	Super Admin	Admin Console

Audience Q&A cheat sheet

- "Is it live / multi-user?" → This is the working prototype. Data persists per browser. Production (shared DB + Google sign-in) is the next phase — see the architecture blueprint.
- "Who sees what?" → Role-based portals — MD sees all; each role only sees their own projects, files and requisitions.
- "How do statuses get decided?" → Rule-based. Progress, file SLA, and compliance all recompute from the data — nothing is hand-typed.
- "Is the data real?" → It's modeled on Zoneware's real project set but anonymized for this demo.
